UID EX 5

Task Analysis

Task Analysis is the process of breaking down a user's interactions with a system into smaller, manageable steps to understand how users achieve their goals. It helps in identifying user needs, pain points, and areas for improvement.

Key Aspects of Task Analysis:

• Understanding what tasks users perform.

• Identifying the sequence of actions required to complete a task. Analyzing user pain points and inefficiencies.

• Defining requirements to improve the user experience.

User Flow

User Flow is a visual representation of how users navigate through an application to complete a specific goal. It shows the steps users take from the entry point to the final action.

Key Aspects of User Flow:

• Represents decision-making paths (e.g., what happens if a user cancels a form?).

• Maps different navigation possibilities (e.g., alternative ways to reach the goal).

• Shows how users move between screens.

User Flow for an E-Commerce Website

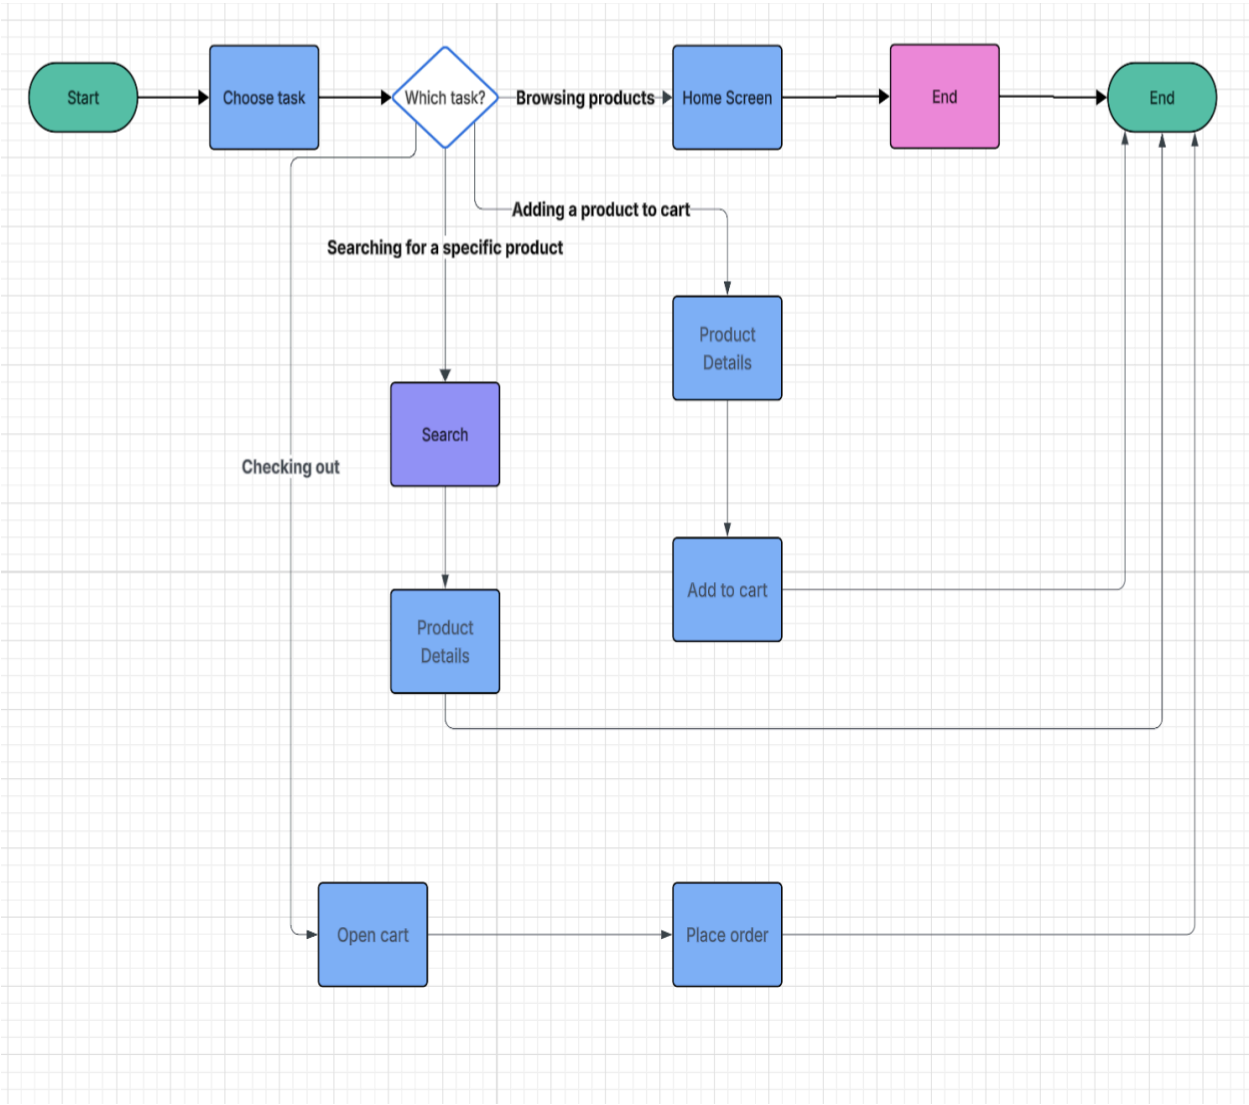
Start → Choose Task → Which Task? → Browsing Products → Home Screen → Product Details → End

Start → Choose Task → Which Task? → Search → Product Details → End

Start → Choose Task → Which Task? → Product Details → Add to Cart → End

Start → Choose Task → Which Task? → Open Cart → Place Order → End

User Flow for an E-Commerce Website



Step 1: Start

- The process begins when the user opens the **shopping application or website**.
- The system initializes and displays the main interface for the user.

Step 2: Choose Task

- The user is presented with options to choose an activity.
- The user decides what task they want to perform in the application.

Step 3: Decision – Which Task?

- The system asks **which task the user wants to perform**.
- The user can select one of the following options:
    - Browse products
    - Search for a specific product
    - Add product to cart
    - Checkout process

Step 4: Browsing Products

- If the user chooses **Browsing Products**, they are directed to the **Home Screen**.
- The home screen displays a list of available products in the store.

Step 5: View Product Details

- The user selects a product from the list.
- The system displays the **Product Details page** which includes:
    - Product name
    - Description
    - Price
    - Product specifications.

Step 6: Search for a Specific Product

- If the user chooses to **search for a product**, they enter a keyword or product name.
- The system searches the database and displays matching products.

Step 7: Select Product and View Details

- From the search results, the user selects a product.
- The system shows the **Product Details page** for that item.

Step 8: Add Product to Cart

- After reviewing the product information, the user can select **Add to Cart**.
- The product is added to the user's **shopping cart**.

Step 9: Open Cart

- When the user finishes selecting items, they open the **shopping cart**.
- The cart displays:
    - Selected items
    - Quantity
    - Total price.

Step 10: Place Order

- The user reviews the items in the cart and confirms the purchase.
- The system processes the order and prepares it for checkout.

Step 11: End

- The process ends when the **order is successfully placed**.
- The user can exit the application or continue browsing products.
