UID EX 4

Prototype Design with Familiar and Unfamiliar Navigation

I developed a prototype using **Proto.io** for a social media application called **SocialNow**. The aim of this prototype is to combine **familiar navigation elements** with **innovative navigation techniques** to analyze usability and user interaction. The prototype focuses on providing a **simple, intuitive, and engaging user experience**.

The application consists of three primary screens:

1. **Welcome / Onboarding Page**
2. **Login Page**
3. **User Profile / Home Page**

These screens guide the user from entering the application to accessing their personal content.

Familiar and Unfamiliar Navigation in UI/UX Design

Familiar Navigation

Familiar navigation refers to **common interface elements and interaction patterns** that users already understand from other applications. These elements help users interact with the system **without confusion or additional learning**.

Examples include:

- Login forms
- Navigation bars
- Buttons such as Save, Edit, Login, Logout
- Input fields for email and password

Using familiar navigation improves **usability, efficiency, and user satisfaction**.

Unfamiliar Navigation

Unfamiliar navigation refers to **new or unconventional interaction methods** that users may not immediately recognize. These elements can enhance the user experience by making the interface **more interactive and modern**, but they may require users to adapt.

Examples include:

- Gesture-based navigation
- Animated transitions
- Progress indicators
- Hidden menus or dynamic content

When designed properly, unfamiliar navigation can make an application **more engaging and visually appealing**.

Familiar Navigation Elements

• **Email and Password fields** for user login authentication.
• **Sign In button** placed below the input fields for easy access.
• **Sign Up button** for new users to create an account.
• **Back navigation icon** to return to the previous screen.
• **Next button** on the welcome screen for moving to the login page.

These elements follow common UI patterns, making the application easy for users to understand and navigate.

Unfamiliar Navigation Elements

• **Onboarding progress indicators** that show the user's position in the introduction screens.
• **Animated screen transitions** for smoother navigation.
• **Minimalist layout design** that focuses on key actions.

These elements introduce modern interaction techniques that enhance user engagement and overall experience.
